LocalMind predictions versus actual tokenizer counts

Language groups
- Indian
- CJK
- Other

One dot = one measured text.
On dashed line = exact prediction.
Below line = underestimated.
Above line = overestimated.

Axes differ between tokenizers.
Dots overlap; use tables for exact counts.

All 1,800 texts per tokenizer are included. Color shows the existing language groups, not a cause of error.

FLORES+ dev pilot • Content tokens only • No fitting or browser measurement • *MiniCPM: HF JSON tokenizer.
